

# Maximize the return on your SmartView® system with expert staff training for the Maintenance and Troubleshooting of your SmartView system.

## WHAT IS IT?

Remote instructor-led Maintenance and Troubleshooting Training for SmartView systems is conducted online by highly skilled professionals, experienced in both the product and customer applications.

It's delivered remotely and can be attended from a home or office space. Our focused online training is broken down into sections for specific job functions or system components. In addition to the "virtual classroom", we've developed a series of self-

learning labs that use a "live" training system to reinforce the material and focus on specific customer tasks.

Online training systems are used to practice the knowledge gained on a real inspection system.

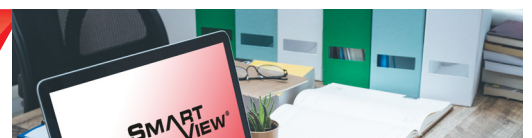

## WHO SHOULD ATTEND?

- Anyone responsible for the troubleshooting of the SmartView inspection system, who should be able to do first-level fault-finding.
- Anyone responsible for the maintenance of the SmartView inspection system.

## WHAT PRIOR KNOWLEDGE IS NEEDED?

No specific inspection knowledge is necessary, but trainees should have a basic understanding of the SmartView inspection system. It's advised to follow the Online Fundamentals training prior to this training.

**REGISTER FOR A TRAINING CLASS**

### TRAINING TOPICS

- What preventive maintenance is required to keep your inspection system in good condition
- How to analyze the camera signal
- How to perform a camera alignment
- What to do and check first if system not working
- What data to prepare in case you need support from AMETEK Surface Vision
- How to reboot a system
- How to replace a camera
- How to replace an SPU
- How to back-up a system
- How to restore your system setup
- Assuring operation of Compact LED light source

### DURATION OF TRAINING

The SmartView Maintenance and Troubleshooting Training is a two-day course comprising four hours of online training each day. The first three hours involve a formal training – after that, candidates will connect to an online SmartView inspection system, under our trainer’s guidance. This lets them practice the knowledge they have gained, get help, and ask further questions.

### TRAINING REQUIREMENTS

- A PC with connection to the internet and Microsoft Teams application
- A quiet room or office location is suggested
- Comfortable headset, large screen, and webcam for class interaction

### COURSE BENEFITS

- > **OPTIMIZE THE QUALITY OF YOUR PRODUCT**  
Keep your system in an optimum status
- > **INCREASE PRODUCTION**  
Reduce downtime
- > **MAXIMIZE RETURN ON INVESTMENT**

“  
*Following the training, I felt like I really understood the systems well and was ready to work with them.*
